Mule Introduces the RIPARO SERIES, Fluorescent Wet Location Architectural Emergency Light

Providence, RI -- The RIPARO SERIES offers Italian design, reliability and increased fixture to fixture performance. The use of fluorescent technology allows for an improved spread of light, fewer units to install and maintain and creates a safer environment during a power failure. The lens is clear by design, allowing the greatest amount of light to be dispersed. Designed for wall or ceiling installations.

The Riparo is supplied standard with a fully configured auto-test feature that continually monitors the functional operation of the unit. The lamp, battery and circuitry are continually tested to ensure proper operation. A visual display alerts of any malfunctioning component.

The Riparo carries an IP65/Wet location rating. Emergency units are especially vulnerable to fire sprinkler activation since emergency lighting units are often installed right next to sprinkler heads. The IP65/Wet location rating ensures protection not just from ambient moisture but also from jets of water like those given off by broke or activated sprinkler heads.

The Riparo unit incorporates a 24 watt compact fluorescent lamp with 1350 lumens during DC operation. The Riparo operates at 75% during emergency operations. This in turn, translates into energy efficiency, increased fixture spacing and lower installation costs.
